Agenda

- SharePoint Online List Version 1
- SharePoint Online List Version 2
- OData
- Custom-made (Web.Contents)

SharePoint Online List Version 1

With larger lists...

V1 - Pros & Cons

Pros

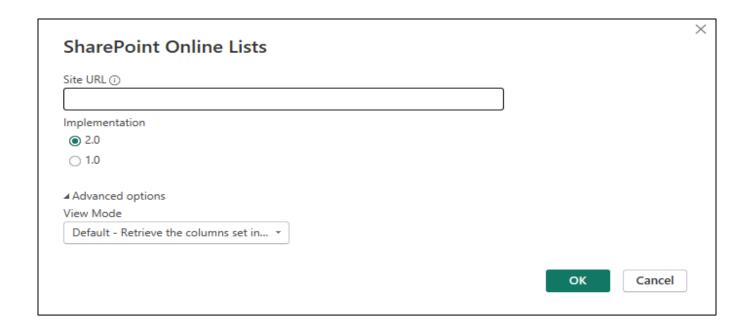

- Easy To Use
- Good for small lists (< 5,000 items)

- Get More Data Than Needed
- Lots of "Cleanup" Power Query Steps
 - Remove Columns
 - Expand Columns
- Slow for larger lists
 - Especially with several lookups

Roche's Maxim on Data Transformation

Data should be transformed as far upstream as possible, and as far downstream as necessary

SharePoint Online List Version 2

V2 - Pros & Cons

Pros

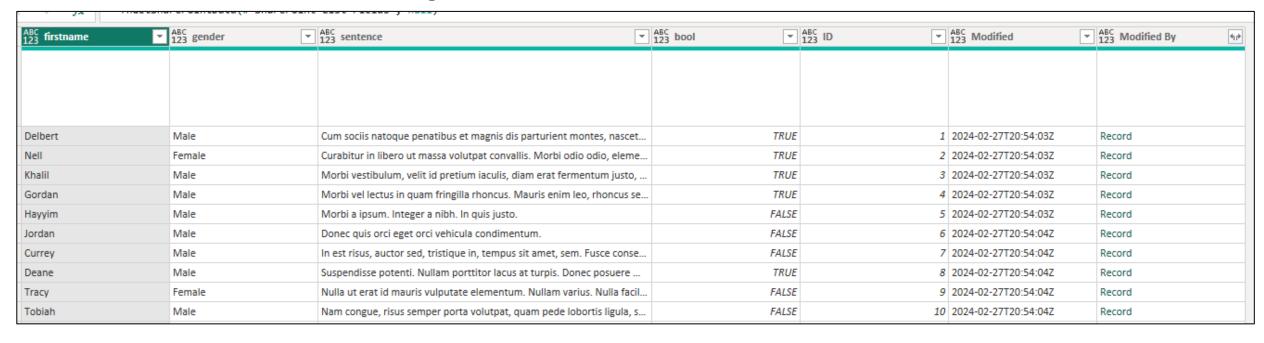

- Easy To Use
- Good for small lists (< 5,000 items)

- Public View dependency could lead to schema drift
 - Or Errors
- Slow for larger lists
 - Especially with several lookups

OData

OData - Example

/_api/lists/GetByTitle('SampleData')/items?\$select=field_1,field_3,field_6,field_7,ID,Modified,Editor/EMail,Editor/Title&\$expand=Editor&\$top=5000

OData - Pros & Cons

Pros

Good for large lists

- You must learn OData syntax:
 Working with lists and list items
 with REST | Microsoft Learn
- Defaults to SharePoint Paging Limit
 - 5,000 items, 100-page limit
 - 50 network calls

Custom-made (Web.Contents)

fnGetFields

- You
 - Supply list name
- Function
 - Contacts the /fields endpoint in SharePoint to retrieve the pertinent columns about the SharePoint list.

Table of Fields

- You
 - Filter fields furthermore to refine query.

fnGetSharePointData

- •You
- •Supply the Table of Fields
- Provide any additional filters.
- Function
- Converts Fields into Odata query.
- Automatically expand results.

An alternative way to import SharePoint list data into Power BI. (github.com)

Results on a Premium Capacity

Dataset	Median – Seconds to Refresh	Standard Deviation – Seconds to Refresh	Number of Refreshes
V2	52.0	3.8	60
V1	44.6	3.4	60
OData	15.1	3.1	60
Custom-made	9.0	18.0	60

Custom-made - Pros & Cons

Pros

- Good for large lists
- You don't have to learn OData syntax
- You can use template to generate OData you

- Standard Deviation was slightly higher
- Combining Data from different SharePoint site may conflict with privacy settings
 - Alternative: Do this in dataflows.
