# Agenda

- Background
- What is DataOps
- Why it Matters
- How it can Help You

## Scenario

Alex – The Boss

Bob – The Data Analyst

<u>Alex</u>

Great job @Bob, the new Power BI Report is going over well with the executives!

Bob
Thanks! That's great to hear!

#### **Alex IMPORTANT!**

@Bob, The executives are in a meeting and the slicer doesn't have all the options like it did yesterday, can you fix it ASAP?

Bob I'm on it!

#### <u>Alex</u>

Thanks for saving the day superhero

#### Alex IMPORTANT!

@Bob, Charlie in Accounting looked at the new Power BI Report and he says the numbers in the table visual don't add up correctly when you update that slicer you fixed yesterday?

#### <u>Alex</u>

Let's get that fixed today.

Bob

I'm on it... may take two days because I need to test.

#### **Alex IMPORTANT!**

I got a call from an executive, the KPI card that uses the same measure in the table you fixed yesterday looks wrong.

Bob I'm on it ⊗

#### <u>Alex</u>

Let's not have more errors today.

#### <u>Alex</u>

Accounting called again, the model has a new column in it, did you do that?

Bob

No, let me check.

#### <u>Alex</u>

Alright... rough week

# Show of Hands

#### Risks

#### Data is a Strategic Asset but...

Data Quality Issues

Defects & Errors

Slow Delivery

More Cost

Disappointment

# DataOps

# What is DataOps?

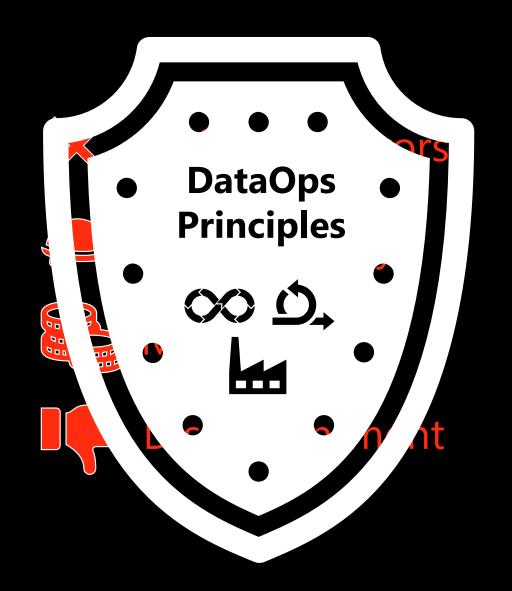

## Why It Matters

Data is a Strategic Asset but...

**运** Complex Data Lineage

Data Quality Issues

# How can it help me?

## Make it Reproducible

Reproducible results are required and therefore <u>we</u> <u>version</u> everything: data, low-level hardware and software configurations, and the code and configuration specific to each tool in the toolchain.

Learn Git Get your work into Version Control

### **Version Control Path**

The Future

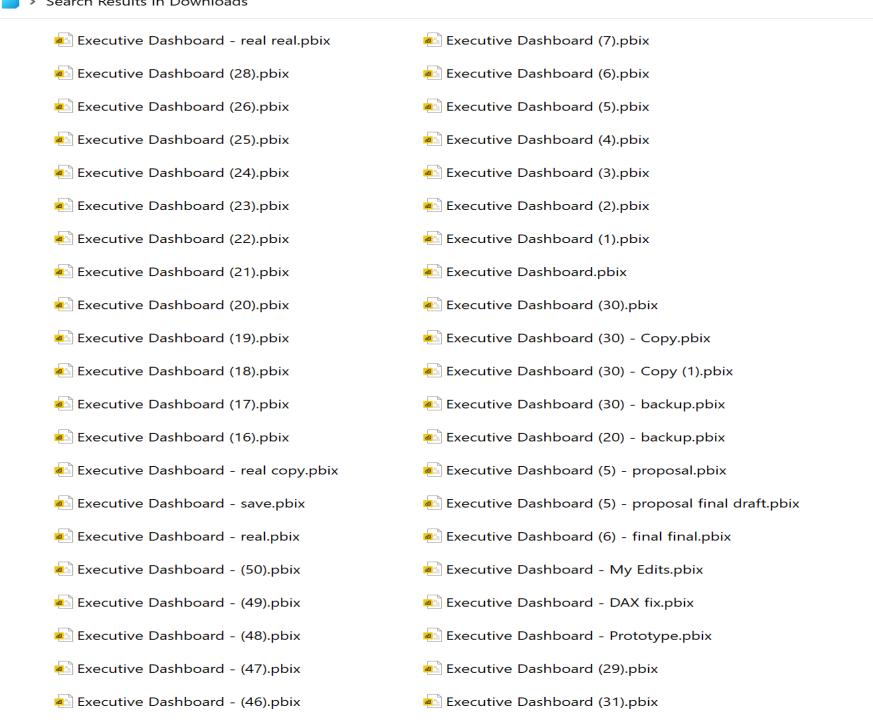

**Next Step to Dev Mode** 

First Step to Dev Mode

**Low Barrier to Entry** 

- Executive Dashboard (32).pbix
- Executive Dashboard maybe fix.pbix

## Quality is Paramount

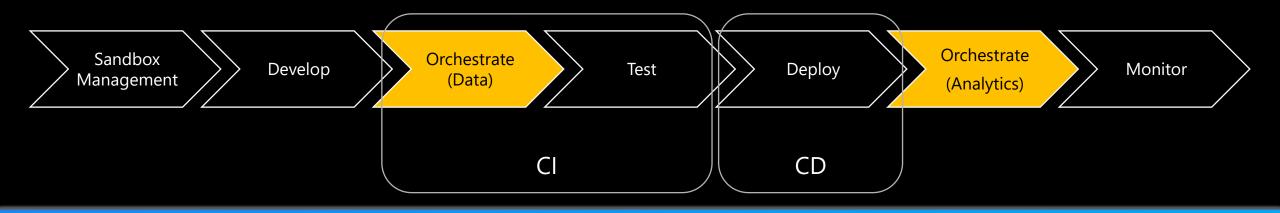

Analytic pipelines should be built with a foundation capable of **automated detection of abnormalities** and security issues in code, configuration, and data, and should provide continuous feedback to operators for error avoidance.

When you Find an Error, Build a Test
Tests are your Safety Net

#### Orchestrate

The beginning-to-end orchestration of data, tools, code, environments, and the analytic teams work is a key driver of analytic success.

Continuous Integration
Continuous Deployment
Scripts over Clicks

## Monitor quality and performance

Our goal is to have performance, security and quality measures that are **monitored continuously** to detect unexpected variation and generate operational statistics.

Catch the Errors Before Your Customers Do
Practice What You Build

#### Reduce Heroism

As the pace and breadth of need for analytic insights ever increases, we believe analytic teams should strive to reduce heroism and create sustainable and scalable data analytic teams and processes.

**Avoid Burnout** 

## Recap – How Can it Help You

- 1. Make It Reproducible Learn/Embrace Git
- 2. Quality is Paramount Find an Error, Build a Test
- 3. Orchestration Implement CI/CD
- **4. Monitor Quality and Performance** Catch Errors Before Your Clients Do
- 5. Reduce Heroism Avoid Burnout

## DataOps Aphorisms

- It is not about the fear of making a change; it is about the removal of fear from making changes.
- It is not about data quality; it is about low rates of error.
- It is not about the next analysis; it is about building a system that makes it easier to answer the next analysis.
- You spend all day helping your customers be more analytic, so why are you so un-analytic about how you run your data analytics teams?
- Don't solve problems, figure out how to never create them in the first place.
