## Credentials

- MCSE: Productivity
- MS: PBI Data Analyst
- PMP

Slides:

# We are going to talk about testing

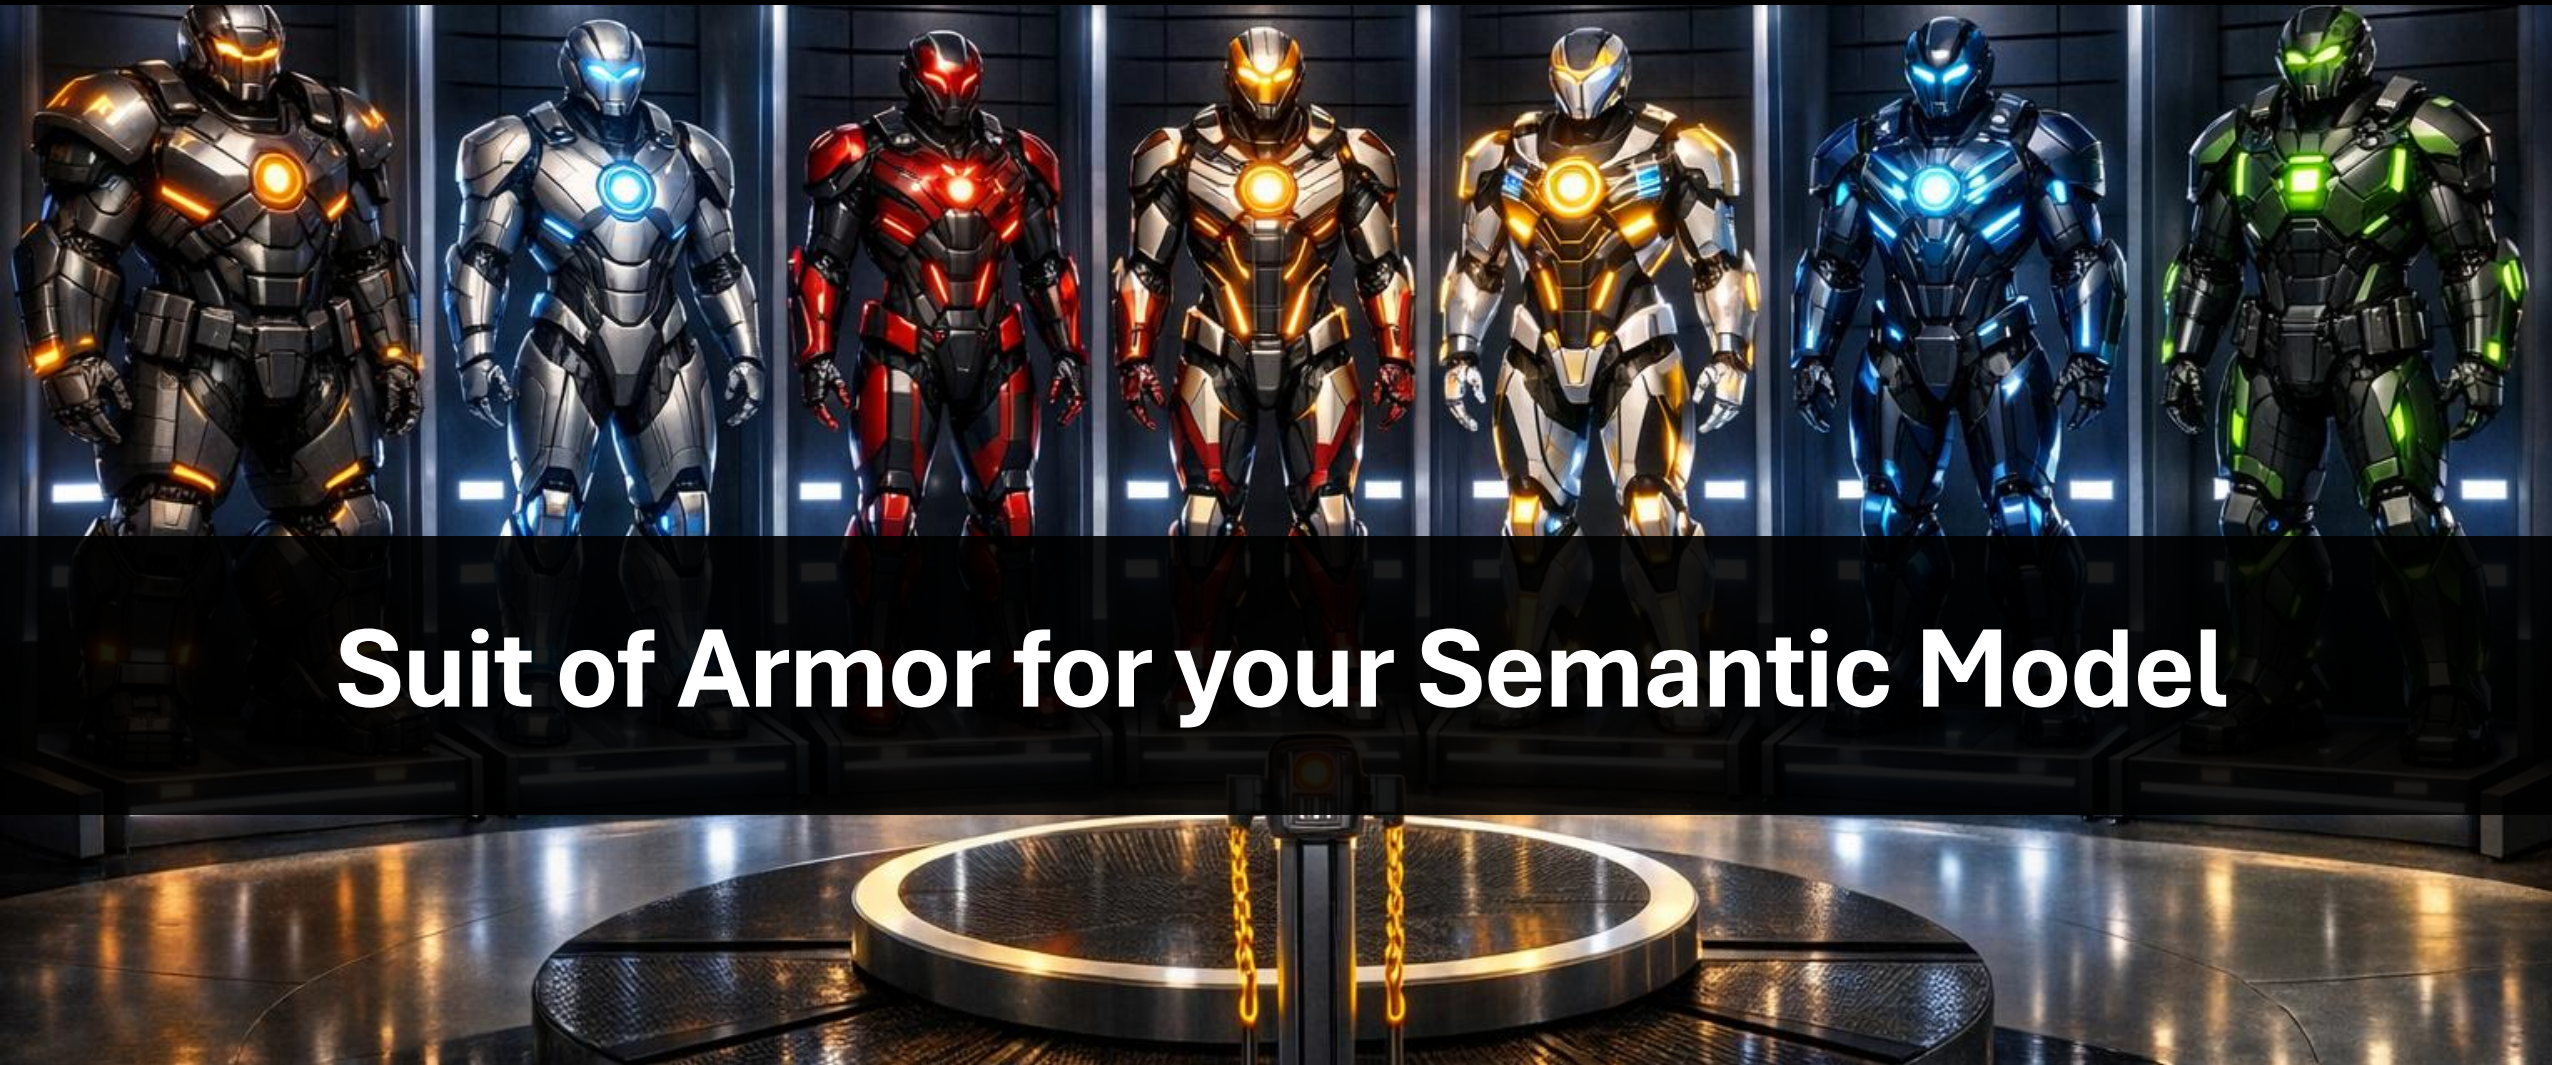

# Agenda

- Why Test?
- DAX Query View Testing Pattern
  - User Defined Functions
- Automated Testing
- AI-Enabled Testing

# Why Test?

**Suit of Armor for your Semantic Model**

# Publish and Pray

# The Effects of Testing

- Find Errors Before Your Customers Do
- Never See The Same Error In Production Again
- Build Trust

**DataOps**

# **DAX Query View Testing Pattern Demo**

# UDF Demo with PQL.Assert

# UDF Prerequisites

1. UDFs are Generally Available
2. < June 2026 Power BI Desktop
  - Turn On UDF Preview

# Frequently Asked Questions

How long should you factor for building a test?

- 30-40 minutes first couple of iterations
- 5-10 minutes when routine

How many tests should I build?

- When errors occur in test and prod, then build a test

How do I “sell” testing to my boss/leadership?

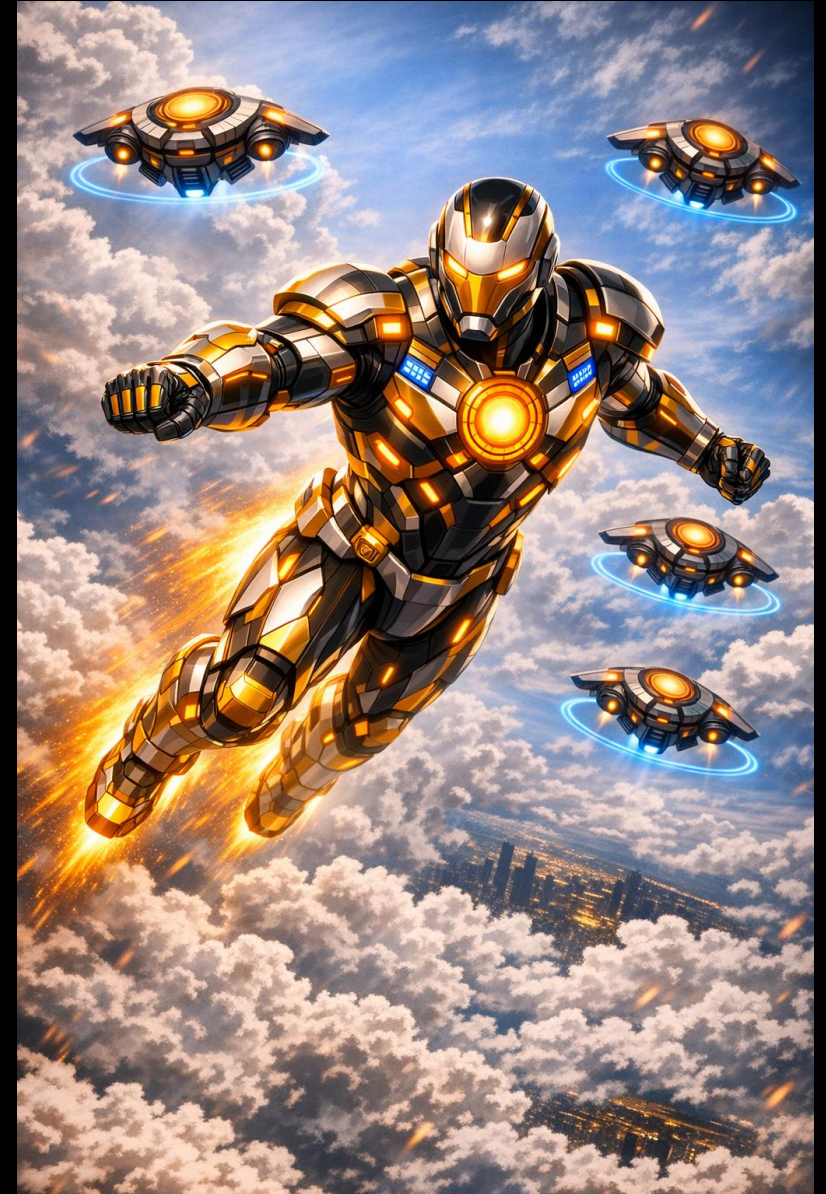

- Focus more on new features rather than fixing old features
- Bad Data = Bad Decisions

# AI-Enabled Testing

# AI-Enabled Prerequisites

1. Visual Studio Code
2. Power BI Project File
3. GitHub Copilot
4. Power BI Modeling MCP
5. Power Query Lint VS Code Extension

# Automated Testing

# Automated Testing Prerequisites

**Power Automate**

**or**

**Microsoft Fabric**

# Questions?
