# ***The Challenge***

## ***The Challenge (cont.)***

# ***Scenario 1***

# Scenario

*What was the table this was merged with?*

*What column was removed?*

*What column was added?*

## APPLIED STEPS

- Source
- Changed Type
- Split Column by Delimiter
- Changed Type1
- Added Custom
- Replaced Value
- Removed Columns
- Merged Queries
- Expanded DateDim
- Removed Columns1
- Renamed Columns
- Sorted Rows
- Removed Columns2
- Merged Queries1
- Expanded EyeColorDim
- Removed Columns3
- Merged Queries2
- Added Custom1
- Changed Type2
- Added Custom2
- Added Custom3
- Expanded AlignmentDim
- Renamed Columns2
- Removed Columns4
- Renamed Columns1
- Changed Type3
- ✕ Sorted Rows1

***Comment Your Code***

# Manual Commenting Code

# Prerequisites

- [GitHub Copilot](#)
- PBIP Format

# GitHub Copilot Prompts

You are an assistant to help Power Query developers comment their code. Please update each line of code by performing the following:

- 1) Insert a comment above the code explaining what that piece of code is doing.
- 2) Do not start the comment with the word Step or a number
- 3) Do not copy code into the comment.
- 4) Keep the comments to a maximum of 225 characters.

You are an assistant to help Power Query developers comment their code.

Please update each line of code by performing the following:

- 1) Update the variable name explaining what that piece of code is doing.
- 2) The variable name should always start with a verb in the past tense.
- 3) The variable name should have spaces between words.
- 4) Please keep the variable to a maximum of 50 characters.
- 5) The variable name should be wrapped in double quotes and preceded by the '#'

You are an assistant to help Power Query developers comment their code. Please update each line of code by performing the following:

- 1) Insert a comment above the code explaining what that piece of code is doing.
- 2) Do not start the comment with the word Step or a number
- 3) Do not copy code into the comment.
- 4) Keep the comments to a maximum of 225 characters.

Please also update each line of code by performing the following:

- 1) Update the variable name explaining what that piece of code is doing.
- 2) The variable name should always start with a verb in the past tense.
- 3) The variable name should have spaces between words.
- 4) Please keep the variable to a maximum of 50 characters.
- 5) The variable name should be wrapped in double quotes and preceded by the '#'

## ***Scenario 2***

## ***Scenario 3***

# Since the beginning...

## POWER QUERY LACKS A REGULAR EXPRESSION FEATURE

- Prerequisites
  - Azure Foundry
    - A GPT model deployed. Instructions can be followed [at this link](#).
    - GCC
      - [Federal-Business-Applications/whitepapers/copilot at main · microsoft/Federal-Business-Applications \(github.com\)](#)
- [Example of Using a GPT model in Power Query](#)

# ***Lessons Learned***

# Lessons Learned - MCP

- Best Practices
  - Too many tools, too much context → Will cost you more money
  - Don't trust and Do Verify
  - Have a safety net with Git (version control)
- AI-Enabled Power BI Developer
  - [YouTube Series](#)

# Lessons Learned - Prompts

## ChatGPT Prompt Engineering for Developers

*You are an assistant to help Power Query developers comment their code.*

*Please take the code between the `` ` and `` ` in the following:*

- 1) Return a comment explaining what that piece of code is doing.,*
- 2) Do not start the comment with the word Step or a number,*
- 3) Do not copy code into the comment.*
- 4) Keep the comments to a maximum of 225 characters.*

*`` `[Code] ``*
