Slides:

We are going to talk about testing

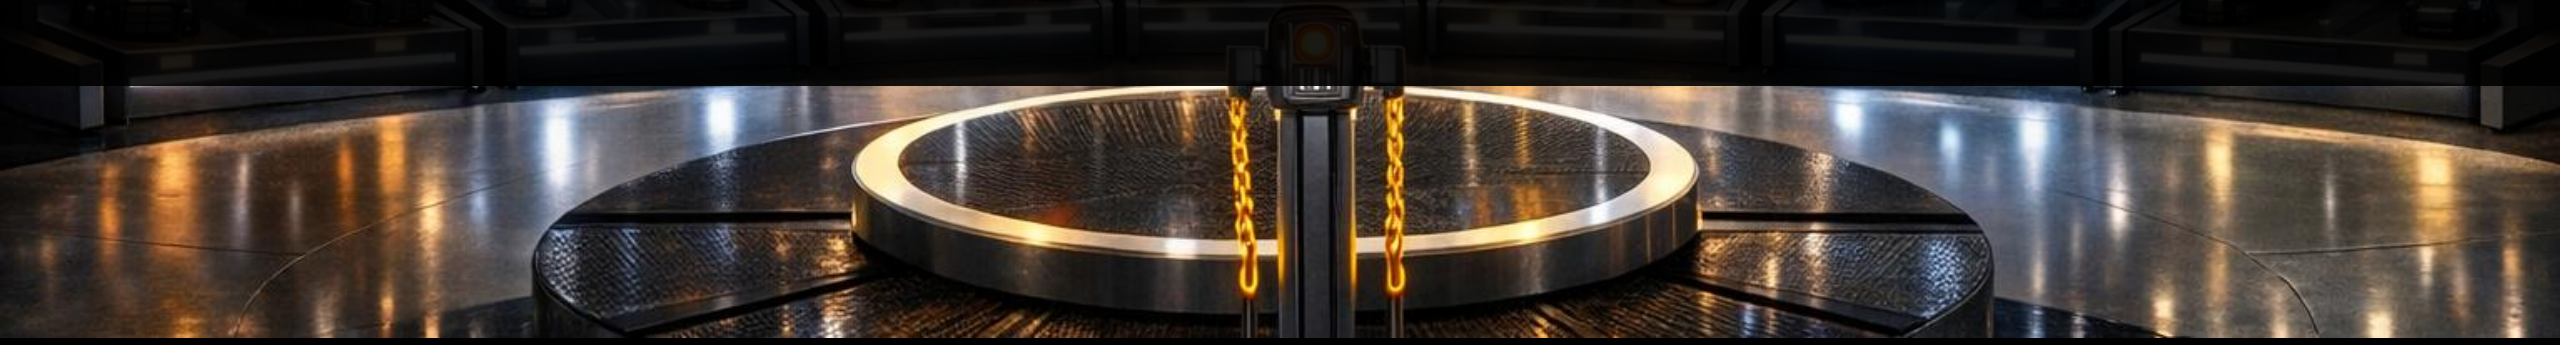

Agenda

- Why Test?
- DAX Query View Testing Pattern
- Reuse
  - User Defined Functions
- Automated Testing
- AI-Enabled Testing

Why Test?

Suit of Armor for your Semantic Model

Publish and Pray

The Effects of Testing

- Find Errors Before Your Customers Do
- Never See The Same Error In Production Again
- Build Trust

DataOps

DAX QUERY VIEW TESTING PATTERNS

DAX Query View Testing Pattern Demo

Prerequisites

1. Recent Release of Power BI Desktop

REUSE

User Defined Functions (UDF)

UDF Prerequisites

1. Recent Release of Power BI Desktop

UDF Demo with PQL.Assert

Frequently Asked Questions

How long should you factor for building a test?

- 30-40 minutes first couple of iterations
- 5-10 minutes when routine

How many tests should I build?

- When errors occur in test and prod, then build a test

How do I “sell” testing to my boss/leadership?

- Focus more on new features rather than fixing old features
- Bad Data = Bad Decisions

Automated Testing

Automated Testing Prerequisites

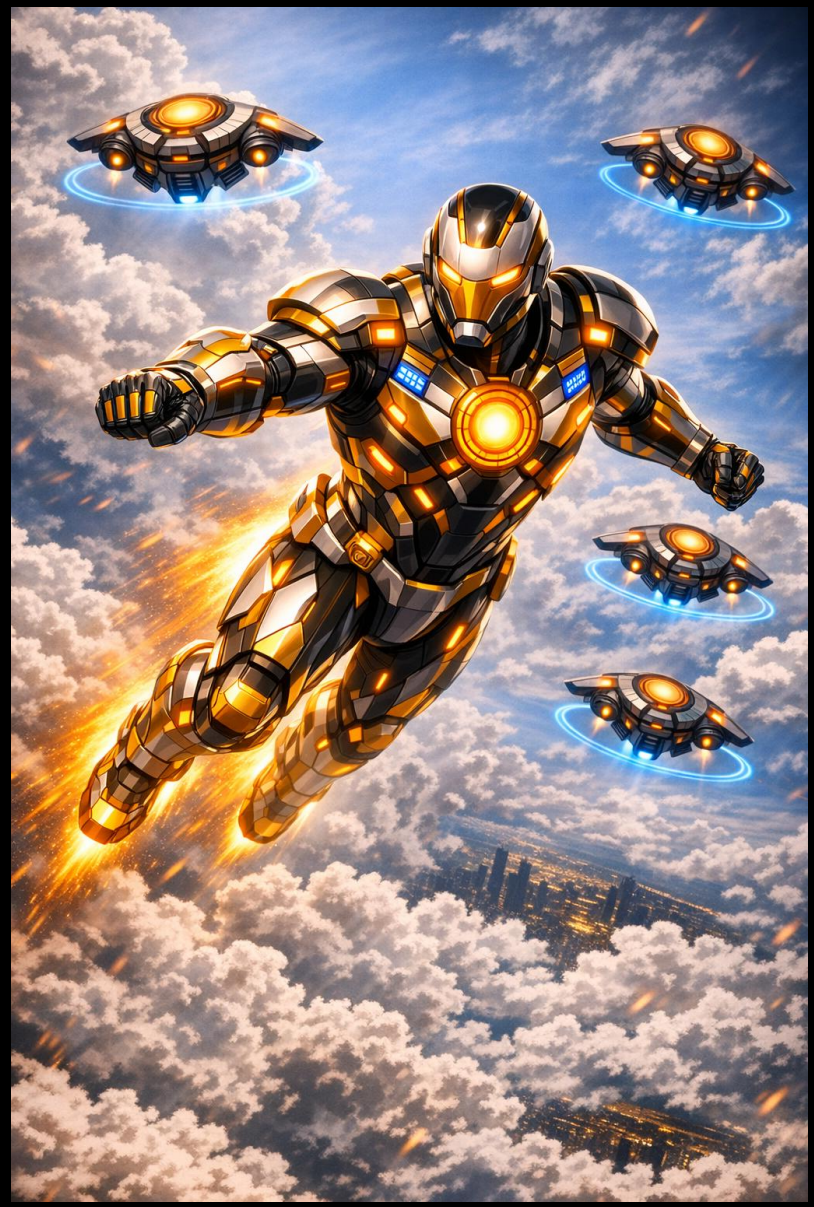

1. Local – CLI
2. Cloud
    1. Power Automate
    2. Microsoft Fabric

AI-Enabled Testing

AI-Enabled Prerequisites

1. Visual Studio Code
2. Power BI Project File
3. GitHub Copilot
4. Power BI Modeling MCP
